

Nutrafeed Soluble Fertiliser for Citrus

Note:

1. The above rates are for tree populations of 200-250 tree/ha. For higher tree populations, decrease rates per tree accordingly.
2. Rates will also vary depending on tree vigour and variety.
3. **Don't** apply nitrogen after mid-Summer.
4. For 4 year old trees and older, the timing of NUTRAFEED 23 and urea can be reversed if you choose, or applied in combination.
5. If additional potassium is required, use Potassium Sulphate Soluble or Liquid Potassium Thiosulphate.
6. If additions of calcium are required, apply Calcium Nitrate.

Further Information
