

Organic Based Fertilizers

BLOOD & BONE

Patons BLOOD & BONE is the original and the best. BLOOD & BONE is a wholly organic blend especially formulated for the requirements of a wide range of plants. It provides an organic source of nitrogen and phosphorous and is excellent as a general garden fertilizer. BLOOD & BONE animates and fortifies tired soil by replenishing the soil microbes essential for healthy plant growth.

Recommendations:

Suitable for a broad range of plants including fruit, vegetables, flowers and bulbs.

Incorporate prior to planting. Can be applied at any time in accordance with your garden program. If applying to perennial plants such as fruit trees and flowering ornamentals, apply prior to spring growth period and again in autumn. Incorporate into soil if using as a starter fertilizer in vegetable crops, digging into a depth of 50 - 100mm.

Clay soils: 75 - 100 gm /m².

Sandy soils: will require lesser amounts - 75 gm / m².

FEATURES & BENEFITS

- Organic Ingredients for continued release of nutrients
- Increases microbial action in the soil
- Low burn potential with natural ingredients
- Contains calcium - Essential for plant health

PRODUCT ANALYSIS

Total Nitrogen as organic	5.4 %
Phosphorous as water soluble	0.2 %
Phosphorous as citrate soluble	2.9 %
Phosphorous as citrate insoluble	2.2 %
Total Phosphorous	5.3 %
Sulphur (S)	0.2 %
Calcium (Ca)	11.0 %
Iron (Fe)	0.4 %
Zinc (Zn)	0.01 %

Application Hints:

Patching can appear if an even spreading of the product is not successfully achieved. If hand broadcasting, mixing the fertilizer with a carrier such as sand or soil before spreading can achieve a more even result. Alternatively apply less fertilizer but go over the area twice in different directions (one at a right angle to the other).

Important Things to Remember:

- Always water fertilizer in well, immediately after application. Watering should involve a thorough saturation of the area.
 - Avoid direct contact with plant roots, seeds, etc.
 - Even, light and regular applications of a quality product will achieve the best results.
 - Always reseal bags after use and dispose of empty containers properly.
 - Sandy soils will require lower rates of fertilizer but more frequent applications
 - Apply sparingly on potted plants as excessive fertilizer can cause burning relatively easily.
 - It is much safer to apply small amounts on a regular basis.
- Do not exceed the recommended application rates as this can be harmful to plants.*
