

## Spring 2007

There seems to be considerable optimism that this year will be a good spring which we are well and truly overdue for. In this edition of Home Garden News is the latest on what is happening at Paton Fertilisers and Fertico.

### Recovering Gardens After Drought

With any luck we have now seen the worst of the dry conditions that have been throughout much of the country for several years. It is likely that there will be a large number of gardeners that will be getting back into their gardens now. It is now the time to stock up on Paton Gypsum, No 17 Lawn Food and Banana Special to be ready for the warmer spring weather which is just around the corner. Don't forget that Paton also has a range of more specialised fertilisers such as Citrus Food, Azalea & Camellia, Rose Food and Native Plant Food.

## Spring Orders

With the recent wet weather we are expecting a busier than usual Spring. Please try to get your orders in early to ensure we can fill your order as soon as possible. We have been busy building up stock over the cooler months so there should be plenty of stock ready to go.

## Paton Website

You will notice that the process of updating the Paton Website has begun. Some changes have been made already and we are aiming to have the complete new site operational in early Spring. Check it out with the link below

### Banana Special now available in 20kg bags

Banana special is now available in the new hard wearing plastic bags. Banana Special is ideal for use on a wide range of plants around the home. This is the latest addition to the new and improved 20kg bag range of home garden fertilisers.

## Nutritional Guide for Healthy Gardens

Have you seen the nutritional guide to the Paton Range especially designed for home gardeners? This is a great reference to show people who may need a point in the right direction on their fertiliser selection. There is a full description on products in the home garden range. [Click here to view.](#)

## Granular Soil Conditioners

Paton Fertilizers and Fertico have available granular soil conditioners in Lime, Dolomite and Gypsum. These have traditionally been used by councils and the turf industry as they have all the benefits of the soil conditioner but without the dust. When you apply the granular products, they are easier to spread and there is not a cloud of dust that covers the neighbourhood. For more information on these products, please contact you regional representative.
